At Trafi, we firmly believe that the future of urban mobility lies in the hands of cities and that its foundation must be public transport.

We help cities to launch Mobility-as-a-Service solutions in record time. Trafi’s MaaS suite brings both public and shared mobility services - all in one place - enabling smooth and sustainable trips within cities.
The white-label app covers each and every traveler’s mobility need

**Master account** to find, compare, book and pay for both public transport and any integrated shared mobility services

**Door-to-door** multimodal trip planning with rich real-time information

Trip planning is **responsive & adaptive** to the real-time traffic situation

**Disruption** alerts

**Seamless payment** for any mobility service (PayPal, debit or credit card)
Trafi Back Office

A set of operational tools to monitor MaaS service performance, manage promotional campaigns, and provide customer support. Includes: analytics, marketing, support and fraud detecting tools.

Trafi Back End

Mobility data management and integration hub that does all the technical heavy lifting. From capturing, enhancing, and presenting mobility data, to providing a varied selection of door-to-door routes based on deep integrations of MSPs and 3rd party providers.
BVG Jelbi orchestrated by Berlin

BVG Jelbi is Berlin's mobility app that integrates all public transport and shared mobility options into a one-stop-shop for Berliners to find, book, and pay for their trips.

The BVG Jelbi app plays a vital role in BVG's smart mobility strategy #Berlinsteigtum to connect every shared mobility offer in Berlin into a single marketplace for its residents to provide an attractive alternative to private car usage.

- Launched in just 6 months
- Exclusively deep integrations with all mobility services
- Over 13,000 vehicles integrated covers every kind of public and on-demand mobility need
